

## Physics + Applied Physics 195 — Introduction to Solid State Physics

Donhee Ham, Gordon McKay Professor of Applied Physics and EE, Harvard University

Lecture Note — Table of Contents (2015, Fall, Harvard University)

- Lecture #1 Crystal binding.
- Lecture #2 Free electron Fermi gas — a theory of metals.
- Lecture #3 Elementary theory of electrical conductivity — Drude theory.
- Lecture #4 Crystal lattice waves.
- Lecture #5 Phonons + thermal properties due to lattice waves.
- Lecture #6 Introduction to electrons in a periodic potential and band theory (1D tight binding).
- Lecture #7 Crystal lattice and structures.
- Lecture #8 Reciprocal lattice.
- Lecture #9 Wave scattering by crystals; X-ray diffraction.
- Lecture #10 Bloch's theorem and Brillouin zones.
- Lecture #11 Electronic band structure (I) — Tight binding (multi atoms/cell; one orbital/atom).
- Lecture #12 Electronic band structure (II) — Tight binding (multi atoms/cell; multi orbitals/atom).
- Lecture #13 Electronic band structure (III) — Nearly free electron model.
- Lecture #14 Band picture of solids.
- Lecture #15 Graphene band structure.
- Lecture #16 Bloch electron dynamics (I) — Equation of motion; effective mass tensor.
- Lecture #17 Bloch electron dynamics (II) — Conductivity & plasmonic mass tensors; cyclotron mass.
- Lecture #18 Semiconductors (I) — Silicon.
- Lecture #19 Semiconductors (II) — Germanium and Gallium Arsenide.
- Lecture #20 Intrinsic and extrinsic (doped) semiconductors.
- Lecture #21  $pn$  junction diodes and bipolar junction transistors.
- Lecture #22 Collective phenomena (I) — Plasmonic excitation in a 3D conductor.
- Lecture #23 Collective phenomena (II) — Plasmonic excitation in a 2D conductor.
- Lecture #24 Collective phenomena (III) — Screening.
- Lecture #25 Collective phenomena (III) — Lindhardt dielectric function (SCF and RPA).
- Lecture #26 Paramagnetism and diamagnetism from free atoms.
- Lecture #27 Paramagnetism in solids and paramagnetism with conduction electrons.
- Lecture #28 Electron paramagnetic resonance and nuclear magnetic resonance.
- Lecture #29 Some consequences of electron-electron interactions: exchange and Mott transition.
- Lecture #30 Spontaneous magnetic order — ferro, anti-ferro, and ferri magnetism.
- Lecture #31 Dynamical phenomena in magnets — spin waves and ferromagnetic resonance.
- Lecture #32 Phenomena at optical frequencies — phonon polaritons, surface plasmon polaritons, interband transitions, and excitons.
